### MDDP AND FINAL DRAINAGE REPORT FOR PATHS AT PIKEVIEW

#### **Engineer's Statement:**

**Developer's Statement:** 

This report and plan for the drainage design of PATHS AT PIKEVIEW was prepared by me (or under my direct supervision) and is correct to the best of my knowledge and belief. Said report and plan has been prepared in accordance with the City of Colorado Springs Drainage Criteria Manual and is in conformity with the master plan of the drainage basin. I understand that the City of Colorado Springs does not and will not assume liability for drainage facilities designed by others. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

David L. Mijares, Colorado PE #10510 For and on behalf of Catamount Engineering

Date

1.11.19

<u>Goodwin Knight</u> hereby certifies that the drainage facilities for <u>PATHS AT PIKEVIEW</u> shall be constructed according to the design presented in this report. I understand that the City of Colorado Springs does not and will not assume liability for the drainage facilities designed and/or certified by my engineer and that are submitted to the City of Colorado Springs pursuant to section 7.7.906 of the City Code; and cannot, on behalf of <u>PATHS OF PIKEVIEW</u> guarantee that final drainage design review will absolve <u>Goodwin Knight</u> and/or their successors and/or assigns of future liability for improper design. I further understand that approval of the final plat does not imply approval of my engineer's drainage design.

### MDDP AND FINAL DRAINAGE REPORT FOR PATHS AT PIKEVIEW

### **PURPOSE**

The purpose of this master development drainage report and final drainage report for Paths at Pikeview is to quantify historic storm water runoff from offsite basins, analyze impacts of site development, present solutions for collection and conveyance to the proposed regional detention facility within the southern portion of the parcel, and exhibit compliance with previous approved drainage studies.

The study presents analysis and sizing of proposed private on-site full spectrum detention pond and public conveyance of runoff from existing upstream development through the parcel to outfall within Monument Creek. Development of the proposed Paths at Pikeview development requires full spectrum detention of on-site impervious areas prior to outfall to Monument Creek and proposes development of a private on-site extended detention basin.

### **GENERAL LOCATION AND DESCRIPTION**

The subject 11.32 acres are located within a portion of SW ¼, Section 30, T13S, R66W within the City of Colorado Springs, El Paso County, Colorado. The parcel is bounded to the North by the Templeton Gap Floodway, to the East by Emerald Acres Filing No. 2, to the South by unplatted land developed as a mobile home park, and to the West by unplatted land and Monument Creek. The parcel is proposed to be developed into 90 duplex lots conforming to the existing R-5 residential zoning.

The development is subject to developed runoff from basins to the east and tributary to Monument Creek within the Roswell Area Drainage Plan and is indicated as Pikeview Reservoir No. 2 (since abandoned and sold by the City of Colorado Springs). The site is predominantly sparsely vegetated with native grasses and shrubs with stands of mature tree along the channel frontage and the southeast corner of the site. Existing soils within the drainage consist of Truckton sandy loam (Hydrologic Group A) as determined by the Natural Resources Conservation Service Web Soil Survey. Significant unclassified fill is present along the western limits of the property presumably placed to mitigate bank erosion within Monument Creek.

### EXISTING DRAINAGE BASINS

The area was included in the "Roswell Area Drainage Study Drainage Plan" (DBPS) prepared by United Planning and Engineering dated June 1978 and as further affected by outfall from the Final Drainage Report for Emerald Acres 1&2 prepared by H.J. Kreattli and Sons dated April 1972. Areas studied in the reports were tributary to Pikeview Reservoir No. 2 when owned and utilized by the City of Colorado Springs. Tributary Basins and facilities existing or installed upon the recommendations identified in the DBPS are as follows:

•	Basin II-V	8.26 acres	Q <sub>p</sub> =13.4 cfs	24" CMP under Nevada Ave
•	Basin II-W	.5.89 acres	$Q_p=9.2 \text{ cfs}$	24" CMP outfalls to Winters Dr. Collected in 9' radial inlet at Cascade and Winters
•	Basin II-X	18.82 acres	$Q_{P}=23.9 \text{ cfs}$	24"x24" Area grate with plastic outfall to 36" x22"CMP arch
•	Basin II-Y	13.12 acres	$Q_p= 18.2 \text{ cfs}$	Outfalls through street system to subject parcel at southeast corner

Development of Basin II-Y was additionally studied in the Final Drainage Report for Emerald Acres and identifies collection within the street systems and outfall to the "Reservoir Area" as follows:

•	North side P street	$Q_p=3.3$ cfs
•	South side P Street	Q <sub>p</sub> =0.2 cfs

• Swale N/W Corner Fil. 1  $O_p=7.1$  cfs

Analysis was performed utilizing City of Colorado Springs Criteria current at the time and systems were designed using the 5 year, 6 hour precipitation.

The subject parcel is included in 2 DBPS Basins with the minor northern portion being included in Basin II-E and directly tributary to the Templeton Gap Floodway, and the southern portion identified as Basin II-Z (Pikeview Reservoir) being directly tributary to Monument Creek.

### **EXISTING CONDITIONS**

Existing runoff from basins II-V, II-W, and II-X are limited by upstream infrastructure and capacities as presented in the MDDP were utilized in determining inflow to the 42" CMP at P1 ( $Q_{cap} = 54.5$  cfs,  $Q_{design} = 46.5$  cfs). The basins within the Emerald Acres mobile home park which directly outfall to the Paths at Pikeview development parcel were remodeled utilizing current criteria. The proposed runoff represented in the original report was significantly lower than results from current criteria.

Basin OS1 (1.29 Acres,  $Q_2=1.4$  cfs,  $Q_5=1.9$  cfs,  $Q_{10}=2.4$  cfs,  $Q_{25}=3.0$  cfs,  $Q_{50}=3.5$  cfs, and  $Q_{100}=4.1$  cfs) sheet flows from the existing development to the eastern perimeter of the development.

Basin OS2 (1.06 Acres,  $Q_2=0.8$  cfs,  $Q_5=1.2$  cfs,  $Q_{10}=1.6$  cfs,  $Q_{25}=2.1$  cfs,  $Q_{50}=2.6$  cfs, and  $Q_{100}=3.1$  cfs) sheet flows from the vacant unplatted parcel south of the development to the rear lots at the south of the development and is collected in the existing unimproved swale and conveyed directly to Monument Creek

Basin OS3 (5.87 Acres,  $Q_2=6.1$  cfs,  $Q_5=8.4$  cfs,  $Q_{10}=10.6$  cfs,  $Q_{25}=13.4$  cfs,  $Q_{50}=15.9$  cfs, and  $Q_{100}=18.4$  cfs) consisting of the Emerald Acres Filing No. 2 mobile home park originally modeled a peak flow of 3.5 cfs discharged from the westerly limits of 'P' street. Flows from the mobile home park is collected in the existing unimproved swale and conveyed directly to Monument Creek.

Basin OS4 (6.75 Acres,  $Q_2=7.0$  cfs,  $Q_5=9.6$  cfs,  $Q_{10}=12.2$  cfs,  $Q_{25}=15.4$  cfs,  $Q_{50}=18.3$  cfs, and  $Q_{100}=21.2$  cfs) consisting of the Emerald Acres Filing No. 1 originally modeled a peak flow of 7.1 cfs discharged through a concrete swale through a storage tract at the northwest corner of the mobile home park. Flow within the concrete swale is collected in the existing unimproved swale and conveyed directly to Monument Creek.

### **ONSITE DEVELOPED DRAINAGE BASINS**

The intent of the proposed development is to follow closely to historic drainage patterns while satisfying current City of Colorado Springs development and water quality criteria. The area of the site proposed for impervious development will be contained within the parking/private roadway section and private on-site storm sewer system conveying flows to a proposed regional full spectrum detention basin and water quality facility within the southwest portion of the site prior to outfall.

Development of the site is currently proposed to consist of 134 residential duplex units and a shared clubhouse to include required parking and drive aisles. On-site development will require development of a small diameter stormwater system allowing for capture of impervious areas with connected roof drain and landscape area drain systems not depicted within this report. The small diameter will be conveyed to private pipe conveyance system within the proposed street system and ultimately outfall within the proposed regional detention facility. Final layout and calculations for on-site storm sewer 15" and larger will be provided in an addendum to be submitted with final storm sewer plans.

Basin B1 (0.15 Acres,  $Q_2=0.0$  cfs,  $Q_5=0.1$  cfs,  $Q_{10}=0.2$  cfs,  $Q_{25}=0.3$  cfs,  $Q_{50}=0.5$  cfs, and  $Q_{100}=0.5$  cfs) consist of flow generated within the landscaped areas east and south of the proposed public roadway at the northerly limit of the property. Flows generated within Basin B1 will sheetflow north to the existing Templeton Gap Drainage. The ROW connection is proposed to allow for future development of the westerly parcel.

Basin B2 (0.78 Acres,  $Q_2=0.2$  cfs,  $Q_5=0.5$  cfs,  $Q_{10}=0.8$  cfs,  $Q_{25}=1.2$  cfs,  $Q_{50}=1.6$  cfs, and  $Q_{100}=2.0$  cfs) consisting of entirely landscape area will sheetflow west into the adjacent parcel and be conveyed southerly and into Monument Creek.

Basin B3 (1.85 Acres,  $Q_2=0.2$  cfs,  $Q_5=0.7$  cfs,  $Q_{10}=1.2$  cfs,  $Q_{25}=1.9$  cfs,  $Q_{50}=2.5$  cfs, and  $Q_{100}=3.0$  cfs) consisting of entirely landscape area collects sheetflow from offsite basins OS-1 and OS-4. Flow is conveyed in a 4' wide grass-lined swale at a minimum grade of 0.5% to Design Point 6 at the southerly limit of the property and into Monument Creek.

'A' designated basins consist of the area of the development proposed for residential development. 'A' basins were modeled based on contributing area of roadways/walks (100% impervious), roof areas (90% impervious) and landscape areas (13% impervious). A basins are collected in 24' minimum/60' maximum width curbed inverted crown roadway and parking section and collected in private 10' D=9 inlets and conveyed in private HDPE Storm system to outfall within the proposed regional detention facility.

BASIN	AREA (ACRES)	ROOF (ACRES)	DRIVE (ACRES)	LANDSCAPE (ACRES)	Q2	Q5	Q10	Q25	Q50	Q100
A1	2.52	0.61	1.06	0.85	4.9	6.6	8.2	10.0	11.9	13.4
A2	2.20	0.86	0.60	0.74	3.8	5.1	6.4	7.8	9.4	10.5
A3	1.87	0.46	0.60	0.81	3.0	4.1	5.2	6.5	7.9	8.8
A4	1.14	0.29	0.39	0.46	2.1	2.8	3.6	4.4	5.3	6.0
A5	0.45	0.14	0.15	0.16	0.9	1.2	1.5	1.8	2.2	2.4
A6	0.70	0.06	0.00	0.64	0.3	0.7	1.0	1.7	2.4	2.7

Basin A1 consists of the northerly portion of the development and includes the proposed public street section at the northerly limit. Runoff within the ROW sheet flows to the 8: vertical curb flowline and is conveyed to a crosspan at a lowpoint conveying runoff into the inverted crown private street section. Flows are conveyed in the inverted crown roadway to the proposed private 10' D-9 inlet at Design Point 2. At design point 2 the at-grade inlet intercepts flows of  $Q_5$ =4.3 cfs and  $Q_{100}$ =6.4 cfs and allows a flow-by of  $Q_5$ =2.3 cfs and  $Q_{100}$ =7.0 cfs. Intercepted flows are represented by pipe design point P2 are conveyed in a private 15" HDPE storm to pipe design point P3.

Basin A2 sheet flows to the inverted crown roadway and runoff is conveyed to the proposed private 10' D-9 inlet at Design Point 3. At design point 3 the at-grade inlet intercepts flows of  $Q_5=4.6$  cfs and  $Q_{100}=7.4$  cfs and allows a flow-by of  $Q_5=2.7$  cfs and  $Q_{100}=9.8$  cfs. Combined Intercepted flow of  $Q_5=8.9$  cfs and  $Q_{100}=13.8$  cfs is represented by pipe design point P3 are conveyed in a private 18" HDPE storm to the proposed private Type I manhole at pipe design point P6.

Basin A3 sheet flows to the inverted crown roadway and runoff is conveyed to the proposed private 10' D-9 inlet at Design Point 4. At design point 4 the at-grade inlet intercepts flows of  $Q_5=3.3$  cfs and  $Q_{100}=5.1$  cfs and allows a flow-by of  $Q_5=0.8$  cfs and  $Q_{100}=3.7$  cfs. Intercepted flows are represented by pipe design point P4 are conveyed in a private 15" HDPE storm to pipe design point P6.

Basin A4 sheet flows to the inverted crown roadway and runoff is conveyed to the proposed private 10' D-9 inlet at Design Point 5. At design point 5 the sump inlet intercepts all flows of  $Q_5=5.9$  cfs and  $Q_{100}=18.5$  cfs and ponds to a calculated depth of 0.67'. Intercepted flows are represented by pipe design point P5 are conveyed in a private 18" HDPE storm to the private Type I manhole at pipe design point P6.

Combined flows at design point P6 of 18.1 cfs and  $Q_{100}=37.4$  cfs are conveyed in a private 30" RCP to a concrete forebay in the proposed on-site pond.

Basin A5 consists of the area of the development directly north of the proposed pond location. Flows from basin A5 are collected in a private 5' D-9 inlet and conveyed directly to the pond in a private 12" HDPE storm pipe identified as pipe design point P9.

Basin A6 consists of landscape area and a small area of proposed building roofline directly tributary to the proposed Extended Detention Basin. Runoff generated within Basin A6 sheetflow across landscape areas and out

Offsite flows from Basin OS-1 of  $Q_2=1.4$  cfs,  $Q_5=1.9$  cfs,  $Q_{10}=2.4$  cfs,  $Q_{25}=3.0$  cfs,  $Q_{50}=3.5$  cfs, and  $Q_{100}=4.1$  cfs are diverted in a swale along the easterly property boundary to DP-6 and conveyed in a 4' wide grass-lined swale at a minimum grade of 0.5% to the southerly limit of the property and into Monument Creek.

Offsite flows from Basin OS-4 of  $Q_2=7.0$  cfs,  $Q_5=9.6$  cfs,  $Q_{10}=12.2$  cfs,  $Q_{25}=15.4$  cfs,  $Q_{50}=18.3$  cfs, and  $Q_{100}=21.2$  cfs enter the site from a private concrete swale/rundown and are conveyed in a 4' wide grass-lined swale at a minimum grade of 0.5% to Design Point 6 at the southerly limit of the property and into Monument Creek.

Combined flows at DP-6 of Q<sub>2</sub>=6.6 cfs, Q<sub>5</sub>=9.3 cfs, Q<sub>10</sub>=12.2 cfs, Q<sub>25</sub>=15.7 cfs, Q<sub>50</sub>=18.9 cfs, and Q<sub>100</sub>=22.1 cfs are conveyed in a grass lined swale to historic outfall within Monument Creek..

Offsite flows from Basin OS-3 of Q<sub>2</sub>=6.1 cfs, Q<sub>5</sub>=8.4 cfs, Q<sub>10</sub>=10.6 cfs, Q<sub>25</sub>=13.4 cfs, Q<sub>50</sub>=15.9 cfs, and Q<sub>100</sub>=18.4 cfs are collected in a public 10' Type R inlet at the terminus of the street within the adjacent easterly mobile home subdivision. All flows are intercepted in the inlet ponding to a depth of 8.5". Collected flows (pipe design point P8) are conveyed in a public 18" HDPE storm sewer to a public Type 1 manhole at pipe design point P7.

Pipe design point P1 represents the existing 42" CMP entering the site from the offsite intersection of Cascade Boulevard and Winters Drive. The current pipe ultimate capacity is  $Q_{100}=54.5$  cfs per the Master Development Drainage Report and this number was assumed in downstream calculations. Combined flows at pipe design point P7 of  $Q_{100}=72.9$  cfs are conveyed in a public 48" RCP to a public type 1 manhole at Pipe Design point P10. At the manhole flows are combined with outfall from the proposed on-site extended detention basin. Combined flow at DP P10 of  $Q_{100}=75.3$  cfs are conveyed to protected outfall within Fountain Creek. The outfall will consist of a minimum of 36' long by 12' rip rap pad with an 18" depth of type 'L' rip rap.

### **EXTENDED DETENTION BASIN**

The parcel proposes to develop 11.32 acres tributary to Monument Creek requiring development of water quality treatment and full-spectrum detention per the criteria of the City of Colorado Springs Drainage Criteria Manual Volume 1. Areas proposed to receive impervious cover will be collected in the street and storm conveyance systems and directed to pond prior to offsite release.

The development requires a WQCV of 0.166 acre feet, EURV of 0.431 acre feet, and total (100-YR) detention volume of 0.919 acre-feet. The basin provides the required volume at a WSE of 6132.13. The emergency overflow weir is set an elevation of 6132.25.

The pond will be constructed with 3:1 minimum side slopes above the proposed 100-YR water surface and 4:1 slopes below the 100-YR water surface and is to be vegetated per the approved

final landscape plan. Access will be from the proposed Monument Creek trail/emergency access road along the westerly pond limits.

Outfall from the pond will be to the proposed public 48" RCP proposed along the southerly project boundary which outfalls at a velocity of 11.59 ft/sec to a 10' wide by 36' long 1.5' deep type 'L' rip rap pad within a proposed storm drain easement within Monument Creek. The emergency spillway will consist of a 15' long 2' depth of Type 'M' buried riprap along the 4:1 pond embankment and extended to the existing concrete trail.

### **4-STEP PROCESS**

- 1. The development addresses Low Impact Development strategies primarily through the utilization of landscape swales within rear of buildings directing runoff from buildings and walkways through swales with minimal longitudinal grade prior to outfall to storm systems/extended detention basins where appropriate.
- 2. On-site flow is directed to the on-site private proposed full spectrum extended detention basin constructed with development of the project which outfalls to a small diameter pipe system conveying attenuated flows directly to historic outfall within Monument Creek. Flows will be conveyed in an HDPE pipe system directly to creek outfall to mitigate concerns with existing slope. The extended detention basin provides Water Quality Capture Volume required for this site and attenuates release of flows to approximate historic runoff.
- 3. The ultimate recipient of runoff from the site is Monument Creek. Flows from the site are tributary to the full spectrum extended detention basin constructed on site with development of the Paths at Pikeview development attenuating flows to predevelopment levels. Drainage fees paid at plat recordation will be utilized in funding channel improvements projects throughout the basin. No impacts to Monument Creek are anticipated.
- 4. A Grading, Erosion Control, and Stormwater Quality Plan and narrative will be approved by the city prior to any soil disturbance. The erosion control plan will include specific source control BMP's as well as defined overall site management practices for the construction period. The grading narrative will address materials storage and spill containment during construction operations.

### COST ESTIMATE

### FLOODPLAIN STATEMENT

Portions of the development are proposed within the 500-YR floodplain (Zone X). No portion of the development are proposed within the 100-Yr floodplain as designated per FIRM panel 08041C0514 F, effective March 17, 1997. Flood Insurance Rate Map has been provided in the appendix.

### **DRAINAGE FEE CALCULATION (2019)**

Development of the Paths at Pikeview proposes to plat 11.32 acres within the Roswell Drainage Basin Planning Area subject to the Miscellaneous Basin Fee. The Miscellaneous Basin Fee does not require bridge or pond fees. Drainage Fees are due at the time of plat recordation.

Drainage Fee: 11.32 acres X \$11,905 = \$134.764.6

### **DRAINAGE METHODOLOGY**

This drainage report was prepared in accordance to the criteria established in the City of Colorado Springs Drainage Criteria Manual Volumes 1 and 2, as revised May 2014.

The rational method for drainage basin study areas of less than 100 acres was utilized in the analysis. For the Rational Method, flows were calculated for the 2, 5, 10, 25, 50, and 100-year recurrence intervals. The average runoff coefficients, 'C' values, are taken from Table 6-6 and the Intensity-Duration-Frequency curves are taken from Figure 6-5 of the City Drainage Criteria Manual. Time of concentration for overland flow and storm drain or gutter flow are calculated per Section 3.2 of the City Drainage Criteria Manual. Calculations for the Rational Method are shown in the Appendix of this report.

Urban Drainage and Flood Control District methodology was utilized for determination of street capacity, inlet sizing, and extended detention basin design. UD-Inlet Version 4.05 was utilized in

street capacity and inlet sizing calculations. UD-Culvert Version 3.05 was utilized in developing preliminary pipe sizing. Details and analysis of final storm drain conveyance and collection system will be developed in an addendum to the final drainage report submitted with Private Storm Sewer Plans for Fillmore Apartments Subdivision. Preliminary sizing calculations were provided in the appendix of this report. UD-Detention version 3.07 was utilized in development of extended detention basin and outfall. Street and Inlet Hydraulics version 3.14 was utilized in modeling roadway concrete swales as they exhibit curb section hydraulics. Calculations are included in the appendix of this report.

### **SUMMARY**

Development of the Paths at Pikeview residential development will require that flows be treated for water quality and be detained to historic levels prior to release from the site. Site runoff and storm drain and appurtenances will not adversely affect the downstream and surrounding developments. This report is in general conformance with all previously approved reports which included this site.

## Hydrologic Soil Group

Hydrold	Hydrologic Soil Group— Summary by Map Unit — El Paso County Area, Colorado (CO625)												
Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI									
97	Truckton sandy loam, 3 to 9 percent slopes	А	3.6	35.8%									
101	Ustic Torrifluvents, loamy	В	0.1	0.6%									
111	Water		6.3	63.6%									
Totals for Area of Intere	est		9.9	100.0%									

## Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

### INLET IN A SUMP OR SAG LOCATION

Project = Inlet ID =

Paths at Pikeview Design Point E1

Design Information (Input)	_	MINOR	MAJOR	_
Type of Inlet	Inlet Type =	CDOT Type R	Curb Opening	]
Local Depression (additional to continuous gutter depression 'a' from 'Q-Allow')	a <sub>local</sub> =	1.00	1.00	inches
Number of Unit Inlets (Grate or Curb Opening)	No =	2	2	]
Water Depth at Flowline (outside of local depression)	Ponding Depth =	6.0	8.2	inches
Grate Information		MINOR	MAJOR	Override Depths
Length of a Unit Grate	$L_o(G) =$	N/A	N/A	feet
Width of a Unit Grate	W <sub>o</sub> =	N/A	N/A	feet
Area Opening Ratio for a Grate (typical values 0.15-0.90)	A <sub>ratio</sub> =	N/A	N/A	]
Clogging Factor for a Single Grate (typical value 0.50 - 0.70)	$C_{f}(G) =$	N/A	N/A	]
Grate Weir Coefficient (typical value 2.15 - 3.60)	C <sub>w</sub> (G) =	N/A	N/A	]
Grate Orifice Coefficient (typical value 0.60 - 0.80)	C <sub>o</sub> (G) =	N/A	N/A	]
Curb Opening Information		MINOR	MAJOR	
Length of a Unit Curb Opening	$L_o(C) =$	5.00	5.00	feet
Height of Vertical Curb Opening in Inches	H <sub>vert</sub> =	6.00	6.00	inches
Height of Curb Orifice Throat in Inches	H <sub>throat</sub> =	6.00	6.00	inches
Angle of Throat (see USDCM Figure ST-5)	Theta =	63.40	63.40	degrees
Side Width for Depression Pan (typically the gutter width of 2 feet)	$W_p =$	2.00	2.00	feet
Clogging Factor for a Single Curb Opening (typical value 0.10)	$C_{f}(C) =$	0.10	0.10	]
Curb Opening Weir Coefficient (typical value 2.3-3.7)	$C_w(C) =$	3.60	3.60	]
Curb Opening Orifice Coefficient (typical value 0.60 - 0.70)	$C_{o}(C) =$	0.67	0.67	]
		MINOR	MAJOR	_
Total Inlet Interception Capacity (assumes clogged condition)	<b>Q</b> <sub>a</sub> =	10.4	18.6	cfs
Inlet Capacity IS GOOD for Minor and Major Storms (>Q PEAK)	Q PEAK REQUIRED =	8.4	18.4	cfs
