

MASTER DEVELOPMENT DRAINAGE PLAN AMENDMENT
FOR
STETSON RIDGE

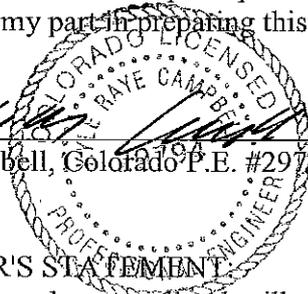

STATEMENT

ENGINEER'S STATEMENT:

The attached drainage letter was prepared under my direction and supervision and is correct to the best of my knowledge and belief. Said drainage letter has been prepared according to the criteria established by the City for drainage reports and said letter is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

Kyle R Campbell, Colorado P.E. #29794

12-8-08
Date

DEVELOPER'S STATEMENT:

I, the developer, have read and will comply with all of the requirements specified in this drainage report and plan.

ATTN: Mrs. Elizabeth Nijkamp

RE: Master Development Drainage Plan Amendment for Stetson Ridge.

Dear Elizabeth:

Please consider this the Master Development Drainage Plan Amendment for Stetson Ridge. This letter is intended to amend the existing MDDP Amendment that was completed by Classic Consulting Engineers & Surveyors, LLC (CCES) titled "The Final Drainage Report for Indigo Ranch at Stetson Ridge Filing No. 3 & 4 and Master Development Drainage Plan Amendment for Stetson Ridge" dated April 2005. That amendment amended the original drainage report for Stetson Ridge titled "Master Development Drainage Plan for Stetson Ridge" by Leigh Whitehead & Associates, Inc. dated January, 2001. This amendment is being written to coincide with a Master Plan Amendment that is currently being processed through City Planning. This Master Plan Amendment reduces the original 21 acres of community park north of Dublin Blvd. to 3.5 acres and added 2 acres of land dedicated to a new Colorado Springs Fire Station and 15.5 acres of single family residential 3.5-7.99 DU/AC. These changes occur in the area of Stetson Ridge north of Dublin Blvd, adjacent to Sand Creek.

A portion of Basin OS-0 has been changed from 7.42 acres of community park and roadway in the previous CCES MDDP amendment to 7.81 acres of single family residential and roadway ($Q_5 = 16$ cfs, $Q_{100} = 33$ cfs).

Previous CCES MDDP amendment Basin OS-6 has been split into OS-6 and FIRE. OS-6 contains community park area and has been reduced from 15.06 acres to 3.50 acres ($Q_5 = 5$ cfs, $Q_{100} = 15$ cfs). Basin FIRE was created to indicate the area for the new Colorado Springs Fire Station. This basin is 2 acres ($Q_5 = 8$ cfs, $Q_{100} = 15$ cfs).

Per the approved storm sewer drawings for Dublin Blvd. Filing No. 2 Storm Sewer plans, there is 42" RCP storm sewer stub on the north side of Dublin Blvd provided to intercept flows from the future development to the north. This includes Basins OS-0 and FIRE as well as Basin OS-5. This 42" RCP storm sewer is at 4.75% slope and is labeled in the provided map as Pipe Run 50 ($Q_5 = 48$ cfs, $Q_{100} = 98$ cfs). This is an increase in flows from the previous Pipe Run 50 ($Q_5 = 27$ cfs, $Q_{100} = 55$ cfs). The overall impact to the ultimate discharge of this system is at previous CCES MDDP amendment Pipe Run 78. Per this amendment flows discharging into Sand Creek at this existing 84" RCP storm sewer is now ($Q_5 = 285$ cfs, $Q_{100} = 560$ cfs). Per the previous MDDP, this outfall was to discharge ($Q_5 = 269$ cfs, $Q_{100} = 526$ cfs). Flows to this point are higher than anticipated within previous MDDP amendment. The moderate increase in flows to this point shall have little to no adverse affects to the Sand Creek Drainage Channel. The storm systems are already installed and the moderate increase in flows can be handled by the existing system.

Basin Fire ($Q_5 = 8$ cfs, $Q_{100} = 15$ cfs) contains 2 acres of the future proposed City of Colorado Springs Fire Station. Flows will be directed to the existing 42" RCP storm sewer stub at Design point 50.

Basin OS-6 ($Q_5 = 5$ cfs, $Q_{100} = 15$ cfs) consists of developed flows from a future community park site. The previous CCES MDDP amendment included portions of Dublin Blvd with in Basin OS-6. This portion of Dublin Blvd is outside of the Stetson Ridge Master Plan boundary and has already been included in the Ridgeview Subdivision MDDP by JR Engineering amendment dated September 2004. Those portions of Dublin Blvd have been removed from this proposed amendment. The anticipated runoff from the area will be directed towards Sand Creek via a roadside ditch that was created with the existing Sand Creek Channel Improvements. See the Creek Improvement Plans by JR Engineering. Flows from the future community park will be collected in a possible future storm system and discharged in to the existing ditch. This includes flows from the future private park entry road north of the intersection of Peterson Road and Dublin Blvd. The community park will require a Final Drainage report to determine the exact system layout.

Basin OS-6A ($Q_5 = 3$ cfs, $Q_{100} = 7$ cfs) consists of 1.12 acres of residential acreage that currently flows into the future planned community park. Depending of future grading and site layout, this 1.12 acres of residential by be routed to Sand Creek rather than added to flows from the community park. Upon development of Basin OS-6A a final drainage report will be required.

Basin OS-0A (10.23 acres) ($Q_5 = 20$ cfs, $Q_{100} = 42$ cfs) is the remainder of the additional single family residential area from the previous 21 acre community park. This portion of the future residential area is to discharge into Sand Creek north of Dublin Blvd. This Basin was shown in the Master Development Drainage Plan for Stetson Ridge by Leigh Whitehead and Associates dated January 2001 as part of Sub-Basins H4 and H5 for Stetson Ridge. At this time there have been no detailed designs or reports for the improvements to this portion of Sand Creek. Upon development of these northerly residential areas, a MDDP amendment and subsequent Final Drainage Reports will be submitted linking this conveyance system to the future outfall systems into Sand Creek. The Sand Creek Channel improvements for this area will be designed and approved with development of the future areas north of Dublin Blvd that discharge into the northerly portions of Sand Creek. The flows from Basin OS-0A will be taken into account with this system.

Basin OS-F ($Q_5 = 9$ cfs, $Q_{100} = 22$ cfs) contains existing Sand Creek and is designated as open space. This area will remain undeveloped.

No portion of the developed site is within a designated F.E.M.A. 100-year floodplain, indicated on Map No. Flood Insurance Rate Maps (F.I.R.M.) Map Number 08041C 0537F, 008041C 0545F, and 08041C 0543, effective date, March 17, 1997 (See Appendix).

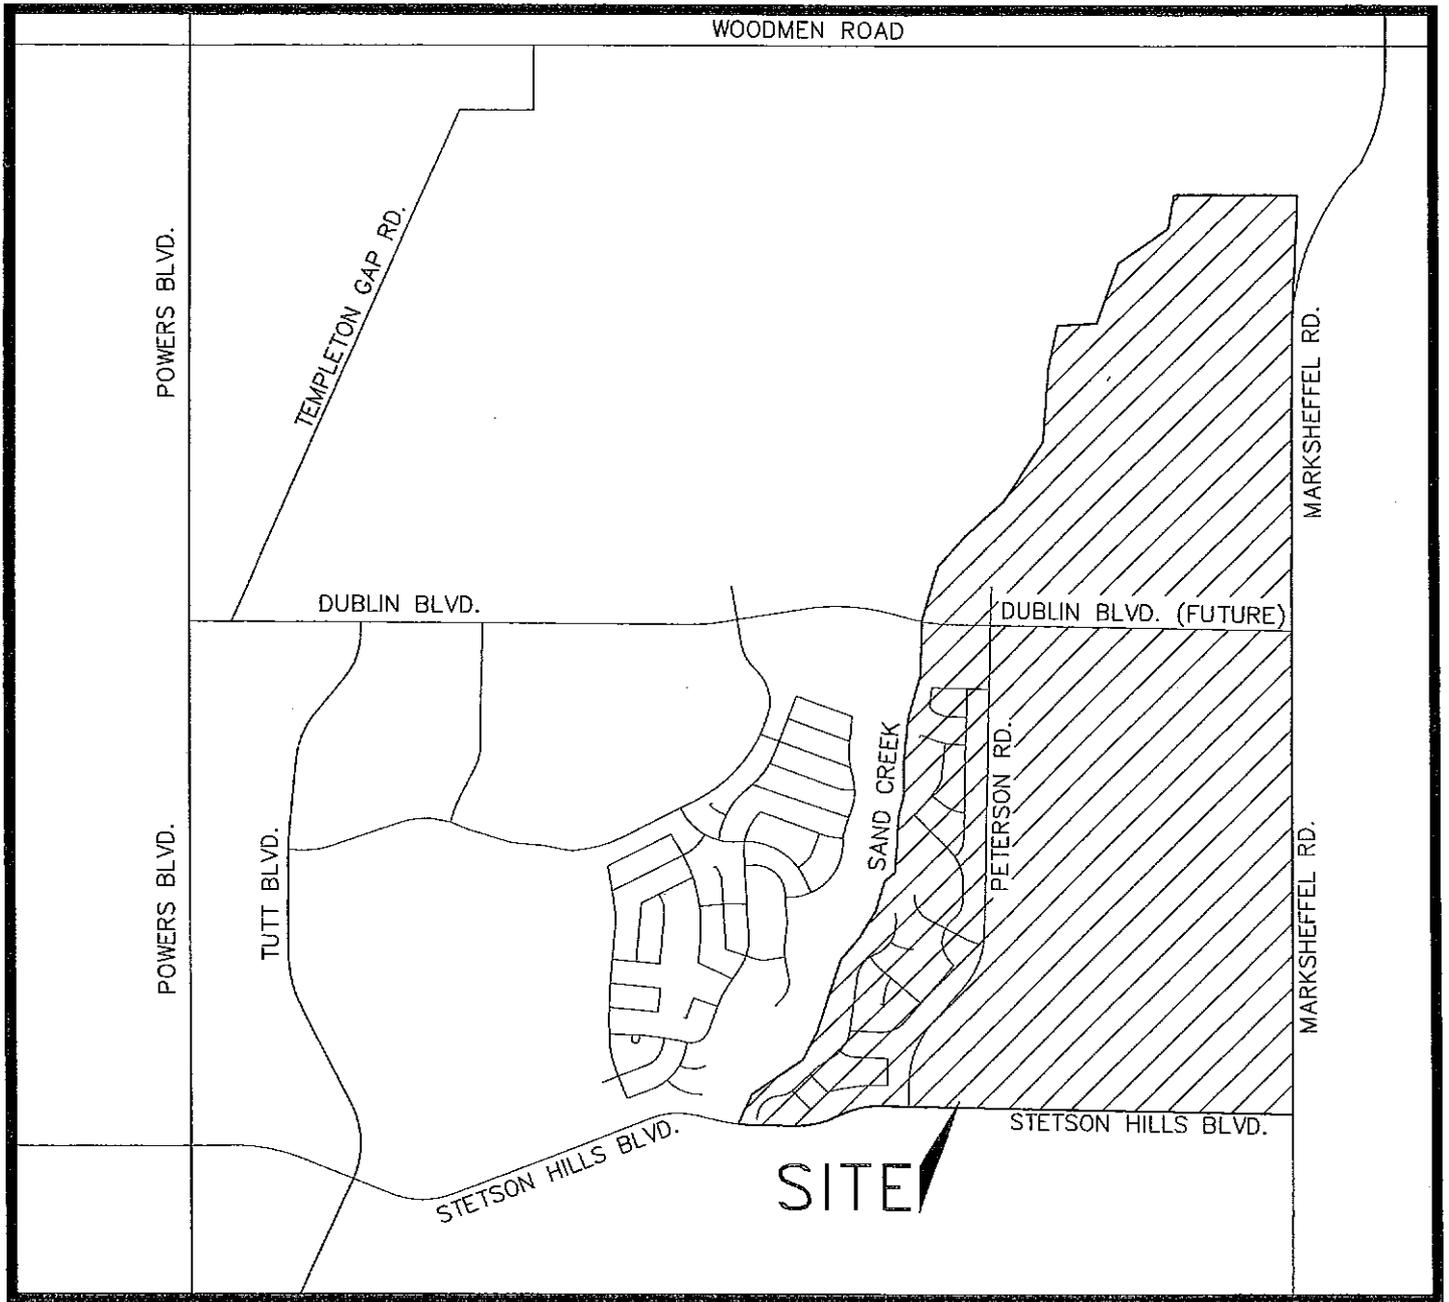

This site lies within the Sand Creek Drainage Basin.

Respectfully submitted,

David L. Gibson, E.I.
Project Engineer
